

COURSE STRUCTURE

Bachelor of Engineering

INFORMATION TECHNOLOGY

Under Choice Based Credit System (CBCS)

PROGRAM OUTCOMES (PO)

- PO1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSO's)

The Graduates of B.E Information technology will be able to

- Use and apply current technical concepts and practices in the core Information Technologies of human computer interaction, information management, programming, networking.
- Effectively integrate IT-based solutions into the user environment.

- 1. Maurice D. Weir, Joel Hass, Thomas' Calculus, Early Transcendentals, 13e, Pearson, 2014.
- 2. Howard Anton, Irl Bivens, Stephens Davis, Calculus, 10e, Wiley, 2016.
- 3. James Stewart, Calculus: Early Transcendentals with Course Mate, 7e, Cengage, 2012.
- 4. Elementary Linear Algebra, Applications version, Anton and Rorres, Wiley India Edition.

Course Outcome:

CO-1: To apply differential and integral calculus to improper integrals and to determine applications of definite integral. Apart from some other applications they will have a basic understanding of indeterminate forms, Beta and Gamma functions

CO-2: To apply the various tests of convergence to sequence, series and the tool of power series and Fourier series for learning advanced Engineering Mathematics

CO-3: To compute directional derivative, maximum or minimum rate of change and optimum value of functions of several variables

CO-4: Mathematics has the potential to understand the core Technological studies

CO-5: To compute the areas and volumes using multiple integral techniques

CO-6: To perform matrix computation in a comprehensive manner

- 4. Elements of Mechanical Engineering by Sadhu Singh S. Chand Publication
- 5. Introduction to Engineering Materials by B.K. Agrawal Tata Mcgraw Hill Publication, New Delhi

Course Outcome:

After learning the course the students should be able to

CO1 To understand the fundamentals of mechanical systems

CO2 To understand and appreciate significance of mechanical engineering in different fields of engineering

CO3 Enhancement of fundamental knowledge of Thermodynamics

CO4 Enhancement of fundamental knowledge of Fluid Mechanics and I.C. Engines

CO5 Acquiring knowledge of materials and their properties for engineering applications

CO6 Evaluate properties of steam. Demonstrate various types of boilers and their relative merits and demerits. Learning problem solving in particular domain.

FEB110003: COMMUNICATION SKILL

Objective: Objective of this curriculum is to help students refresh their knowledge of English language. It also targets the understanding of grammar, focusing on comprehension, and reading, speaking and writing skills. This would be developed through balanced and integrated tasks.

Credit: 2 L-T-P: 3-1-0

- 10. A Course in English Phonetics, T R Kansakar, Orient Longman. 1998

11. Spoken English, R K Bansal and J B Harrison, Orient Longman. 2013 Course Outcome: The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

Course Outcome:

- **CO-1:** Use various forms of vocabulary in varied situations in oral and written communication.
- **CO-2:** Understand the phonetics and the transcription pattern to learn correct pronunciation
- **CO-3:** Comprehend the dynamics of various rules of grammar and check its validation while they speak and writelanguage correctly.
- **CO-4:** Use grammar effectively to make themselves competent Listener, Speaker, Reader and Writer by exposing tovarious set of situations.
- **CO-5:** Write various formal and informal documents of day to day life and professional set up.
- **CO-6:** Demonstrate the qualities of writing in diverse situation by using the nuances such as conciseness, clarity, accuracy, organization, and coherence.

- 4. Introduction to Electrical Engineering, M S Sarma, Oxford University Press

Course Outcome:

After Completion Of The Course, The Student Will Be Able To-

- **CO-1:**Understand electrical current, potential difference, power and energy, sources of electrical energy, resistance and its behavior with temperature.
- **CO-2**: Use the Ohm's Law and the Kirchhoff's Law and star delta transformation for solving resistive series, parallel and series-parallel circuits.
- **CO-3:** Define Electric field, lines of force, electric field intensity, electric flux, flux density and permittivity. Capacitor, charging and discharging phenomena of capacitors and calculations of capacitance for capacitors connected in series and parallel circuits.
- **CO-4:** Understand Concepts of Real power, Reactive power, apparent power and Power factor and perform calculations of these quantities for series and parallel R-L-C circuits.
- **CO-5:** Understand the importance of safety and the precaution to be taken while working with electrical equipment and accessories. Understand the working principle, usage and construction of circuit protection devices such as fuse, MCB, ELCB & Relays
- **CO-6:** Design simple analog signal processing functions using operational amplifiers.

Course Outcome:

CO-1: The student will demonstrate the ability to think in core concept of their engineering application by studying various topics involved in branch specific applications.

CO-2: The student will demonstrate understanding of basic theory, properties and applications of Superconductivity.

CO-3: The student will gain knowledge of basic theoretical and mathematical concept of electronic materials.

CO-4: The student will demonstrate understanding of basic principles, properties and applications associated with semiconducting materials.

CO-5: The student will demonstrate understanding of basic theory and properties associated with optoelectronic materials.

CO-6: The student will demonstrate understanding of basic principles, properties, type and application Lasers.

Course Outcome:

After learning the course, the students should be able to

- **CO1** To acquire skills in basic engineering practice
- **CO2** To acquire practical skills in the trades
- **CO3** Understand modern manufacturing operations, including their capabilities, limitations, and how to design economically.
- **CO4** Welding and soldering operations
- CO5 Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping

FEB120403: COMPUTER PROGRAMMING WITH C

Objective: An introduction to computer concepts, logic, and computer programming.

The major objective is to provide students with understanding of code organization and functional hierarchical decomposition with using complex data types.

The course is designed to provide complete knowledge of C language. Students will be able to develop logics which will help them to create programs, applications in C. Also by learning the basic programming constructs they can easily switch over to any other language in future.

FEB120204: ENGINEERING GRAPHICS

Objective: Engineering Graphics is the language of communication for Engineers. Engineering Graphics course provides tools and techniques of communication for various fields of Engineering.

Credit: 5 L-T-P: 3-0-4

Teaching & Evaluation Scheme:-

| | Teaching | Scheme | | Ex | aminat | | | | |
|-----|----------|--------|-------|---------|---------|-----|-----------|------------------------|----------------|

- 4. A text book of Engineering Drawing By R.K.Dhawan, S.Chand& Company Ltd., New Delhi.
- 5. A text book of Engineering Drawing By P.S.Gill, S. K. Kataria & sons, Delhi.

Course Outcome:-

After Learning the course the students shall be able to:

- **CO1:** To know and understand the conventions and the method of engineering drawing.
- CO2: Identify the Drawing Symbols, Conventions used in Engineering Drawing
- **CO3:** Construct the Different types of Engineering Curves.
- **CO4:** To improve their visualization skills so that they can apply this skill in developing new products.
- **CO5:** Apply Descriptive Geometry Principles to Solve Engineering Problems Involving Points, Lines, Planes and Solids
- **CO6:** To improve their technical communication skill in the form of communicative drawings

Course Outcome:-

After learning the course the students should be able to:

- CO-1: Students are able to learn types of disasters and its profile in India..
- CO-2: Students are able to understand the causes and impacts of disasters on environment and related casestudies of Global and National disasters.
- CO-3: Students are able to learn about risk reduction approaches of disasters with safety issues in mitigating industrial disasters..
- CO- 4: To understand the concept of Disaster Management Cycle and its Risk Reduction Measures
- CO-5: Students to learn the National Acts and policies for mitigating disasters, Role of Army, Police, Community, Corporate, Media etc. for post Disaster Management..

Course Outcome:

After learning the course the students should be able to:

- **CO-1:** Define and discuss dynamics of Verbal and Non-Verbal aspects of Communication.
- **CO-2:** Write various formal documents of technical and professional communication.
- **CO-3:** Communicate in diverse formal situations taking place in organization
- **CO-4:** Illustrate and examine the knowledge of ethical aspects of engineering.
- **CO-5:** Demonstrate and explain social and professional etiquettes.
- **CO-6:** Plan self-development and practice self-assessment.

- 4. D. C. Montgomery and G. C. Runger, Applied Statistics and Probability for Engineers, Wiley.
- 5. J. L. Devore, Probability and Statistics for Engineering and the Sciences, Cengage Learning.

Course Outcome:

After learning the course the students should be able to:

CO-1: understand the terminologies of basic probability, two types of random variables and their probability functions

CO-2: observe and analyze the behavior of various discrete and continuous probability distributions

CO-3: understand the central tendency, correlation and correlation coefficient and also regression

CO-4: apply the statistics for testing the significance of the given large and small sample data by using t- test, F- testand Chi-square test

CO-5: understand the fitting of various curves by method of least square

CO-6: understand the central tendency methods and apply it in computer problems

FEB130402: DIGITAL ELECTRONICS

Objective: The objective of this course is to provide the fundamental concepts associated with the digital logic and circuit design. To introduce the basic concepts and laws involved in the Boolean algebra and logic families and digital circuits.

- 1. To acquire the basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
- 2. To prepare students to perform the analysis and design of various digital electronic circuits.

Credit: 5 L-T-P:3-0-2

- 6. Digital Design M. Morris Mano and Michael D. Ciletti, Pearson Education.
- 7. Digital Electronics and Design with With VHDL, Volnei A. Pedroni, Elsevier (Morgan Kaufmann Publishers).

After completion of the course, the students will be able to:

- CO-1: Explain about digital number systems and logic circuits
- **CO-2:** The student should be able to solve logic function minimization
- **CO-3:** The students should be able to differentiate between combinational and sequential circuits such as decoders, encoders, multiplexers, demultiplexers, flip-flops, counters, registers.
- **CO-4:** They should be able to design using FSM
- **CO-5:** They should be able to start writing HDL codes for various digital circuits
- **CO-6:** At the end they should be able to develop a course project using digital integrated circuits

FEB130501: OBJECT ORIENTED PROGRAMMING WITH JAVA

Objective: The main aim of OOP is to bind together the data and the functions that operate on themso that no other part of the code can access this data except that function.

- 1. To understand the basic concepts and fundamentals of platform independent object oriented language.
- 2. To demonstrate skills in writing programs using exception handling techniques and multithreading.
- 3. To understand streams and efficient user interface design techniques.

FEB130404: DATA STRUCTURE & ALGORITHMS

Objective: Understanding of data structures is essential and this facilitates the understanding of the language.

To understand the abstract data types stack, queue, dequeue, and list.

To understand the performance of the implementations of basic linear data structures.

To understand prefix, infix, and postfix expression formats.

To use queues for basic timing simulations.

To be able to recognize problem properties where stacks, queues, and deques are appropriate data structures.

To be able to implement the abstract data type list as a linked list using the node and reference pattern.

To be able to compare the performance of our linked list implementation with Python's list implementation.

Course Outcome:

After learning the course the students should be able to:

CO-1: Understand the basic principles of sets and operations in sets and apply counting principles to determine probabilities, domain and range of a function, identify one-to- one functions, perform the composition of functions and apply the properties of functions to application problems.

- **CO-2:** Write an argument using logical notation and determine if the argument is or is not valid. To simplify and evaluate basic logic statements including compound statements, implications, inverses, converses, and contra positives using truth tables and the properties of logic. To express a logic sentence in terms of predicates, quantifiers, and logical connectives.
- **CO-3:** Apply relations and to determine their properties. Be familiar with recurrence relations **CO-4:** Use the properties of algebraic structures.
- **CO-5:** Interpret different traversal methods for trees and graphs. Model problems in Computer Science using graphs and trees.
- **CO-6:** understand the central tendency methods and apply it in computer problems

FEB140402: COMPUTER ORGANIZATION

Objective: Measurement and Metrology deals with the application of science in Mechanical Engineering. It provides a means of assessing the suitability of measuring instruments, their calibration, and the quality control of manufactured products.

- 1 The purpose of the course is to introduce principles of computer organization and the basic architectural concepts.
- 2 It begins with basic organization, design, and programming of a simple digital computer and introduces simple register transfer language to specify various computer operations.
- 3 Topics include computer arithmetic, instruction set design, micro programmed control unit, pipelining and vector processing, memory organization and I/O systems, and multiprocessors

FEB140403: OPERATING SYSTEM

Objective: The primary purpose of an operating system is to make the most efficient use of the computer hardware. Operating system is software that manages computer hardware and software resources and provides common services for computer programs.

- 1. To provide users a convenient interface to use the computer system.
- 2. To act as an intermediary between the hardware and its users, making it easier for the users to access and useother resources.
- 3. To manage the resources of a computer system.

FEB140404: DESIGN & ANALYSIS OF ALGORITHMS

Objective: Obtaining efficient algorithms is very important in modern computer engineering as the world wants applications to be time and space and energy efficient. This course enables to understand and analyze efficient algorithms for various applications.

- 1. Analyze the asymptotic performance of algorithms.
- 2. Write rigorous correctness proofs for algorithms.
- 3. Demonstrate a familiarity with major algorithms and data structures.

FEB140405: DATABASE MANAGEMENT SYSTEM

Objective: The DBMS manages the data; the database engine allows data to be accessed, locked and modified; and the database schema defines the database's logical structure. These three foundational elements help provide concurrency, security, data integrity and uniform data administration procedures.

The objectives of a database include:

Data Storage: Storing large amounts of data in an organized and efficient manner.

Data Retrieval: Allowing users to easily retrieve specific data as needed.

Data Integrity: Ensuring that data is accurate and consistent.

FEB150401: SYSTEM PROGRAMMING

Objective: As a core subject of Computer Engineering/Information Technology, this course enables to understand importance of System Programming, its functionalities.

- 1. Understand basic concepts in systems programming.
- 2. Understand basic concepts in UNIX file systems and process control.
- 3. Understand UNIX system calls.
- 4. Develop skills to write programs using system services.

FEB150501: PYTHON PROGRAMMING

Objective: Python is a modern language useful for writing compact codes specifically for programming in the area of Server side Web development, Data Analytics, AI and scientific computing as well as production tools and game programming. This course covers the basics and advanced Python programming to harness its potential for modern computing requirements.

- 1. To learn how to write loops and decision statements in Python.
- 2. To learn how to write functions and pass arguments in Python.
- 3. To learn how to build and package Python modules for reusability.

- 5. Data Communications and Networking (4th edition), BehrouzForouzan, McGraw Hill
- 6. TCP/IP Protocol Suite (3rd edition), Behrouz Forouzan, McGraw Hill

After completion of the course, the students will be able to:

- **CO-1:** Identify various layers of network and discuss the functions of physical layer.
- CO-2: Discuss how data flows from one node to another node with regard to data link layer
- **CO-3:** Explain the different services of network layer
- **CO-4:** Compare the different transport layer protocols and their applicability based on user requirements
- **CO-5:** Describe the working of various application layer protocols
- **CO-6:** Evaluate the performance of network and analyze routing algorithms

FEB150503: WEB TECHNOLOGY

Objective: Subject covers the wide range of web technologies both client side and server side to provide the exposure to the students to develop Rich Internet Applications using them.

- 1. It covers the basics WWW, client side technologies like HTML, CSS and DHTML including JavaScript, server side scripting with PHP and database connectivity using PHP and related technologies.
- 2. To comprehend the basics of the internet and web terminologies.
- 3. To introduce scripting language concepts for developing client-side applications.

FEB150405: COMPUTER GRAPHICS

Objective: To understand the basics of various inputs and output computer graphics hardware devices as well as the course will offers an in-depth exploration of fundamental concepts in 2D and 3D computer graphics.

After introducing 2D raster graphics techniques, the course focuses on 3D modeling, geometric transformations, 3D viewing and rendering.

This course presents an introduction to computer graphics designed to give the student an overview of fundamental principles.

The course further allows students to develop programming skills in computer graphics through programming assignments.

FEB150504: DATA MINING & BUSINESS INTELLIGENCE

Objective: Data mining has opened a world of possibilities for business. Its objective is to generate new market opportunities. Data mining converts information into knowledge.

Data mining is used to explore increasingly large databases and to improve market segmentation. By analyzing the relationships between parameters such as customer age, gender, tastes, etc.,

Business intelligence is the process by which enterprises use strategies and technologies for analyzing current and historical data, with the objective of improving strategic decision-making and providing a competitive advantage.

Content

A mini project requires comparatively less time than major projects. They are comparatively simpler and have shorter duration. Mini Project helps students to explore and strengthen the understanding of fundamentals through practical application of theoretical concepts. Mini Project can help them to boost their skills and widen their horizon of thinking. It will act like beginners guide to undertake the major project/dissertation during the final year and will ensure preparedness of students to undertake major projects/dissertation. Students will be required to select the topic relevant to their specialization and that has value addition. Students will get an opportunity to work in actual industrial environment if they opt for internship. Based on the selected topic student will also prepare seminar report based on the literature survey Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available. End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution. Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the departmental committee.

Course Outcome:

After learning the course the students should be able to:

CO1: Demonstrate a sound technical knowledge of their selected mini project topic.

CO2: Undertake problem identification, formulation and solution...

CO3: Design engineering solutions to complex problems utilizing a systems approach.

CO4: Communicate with engineers and the community at large.

CO5: Demonstrate the knowledge, skills and attitudes of a professional engineer.

FEB160403: SOFTWARE ENGINEERING

Objective: A program or set of programs containing instructions that offer desired functionality is referred to as software.

Engineering is the process of creating and building anything that serves acertain function and solves issues in a cost-effective manner.

Software engineering is the systematic, disciplined, quantitative study and approach to designing, developing, operating, and maintaining a software system.

To develop methods and procedures for software development that can scale up for large systems and that can be used consistently to produce high-quality software at low cost and with a small cycle of time.

FEB160501: COMPUTER NETWORK SECURITY

Objective: Present computing era is based on internet and hence networking is an essential part of course. This course aims at learning basic cryptography techniques and applying security mechanisms for operating systems as well as private and public network to protect them from various threats. Network security has three chief aims:

- 1. To prevent unauthorized access to network resources;
- 2. To detect and stop cyber attacks and security breaches in progress; and
- 3. To ensure that authorized users have secure access to the network resources they need, when they need them.

Course Outcomes

After completion of the course, the students will be able to:

- **CO-1:** Understand the principles of the application layer protocols HTTP, FTP, SMTP and DNS
- **CO-2:** Understand the transport layer services, TCP and UDP protocols.
- **CO-3:** Understand the router architecture, IP and routing algorithms
- **CO-4:** Understand the concepts of Network security and cryptography protocols.
- **CO-5:** Understand the multimedia network applications, audio, video streaming and network management.

FEB160502: ADVANCE JAVA

Objective: The course covers Graphical User Interface (GUI) networking, and database manipulation.

- Student will be able to use advanced technology in Java such as Internationalization, and Remote method Invocation. Student will learn how to work with JavaBeans.
- Develop error-free, well-documented Java programs;
- Develop and test Java network, search engine, and web framework programs. Learn how to write, test, and debug advanced-level Object-Oriented programs using Java.

FEB160501: MOBILE APPLICATION DEVELOPMENT

Objective: The course covers Graphical User Interface (GUI) networking, and database manipulation.

Student will be able to use advanced technology in Java such as Internationalization, and Remote method Invocation. Student will learn how to work with JavaBeans.

Developers should aim to create intuitive and easily understandable interfaces so that users can navigate and use the application smoothly.

Smooth navigation and intuitive functionalities increase user satisfaction and encourage long-term retention.

FEB160001: CYBER SECURITY

Objective: Stay up to date with the latest cyber security news and trends and make sure you are implementing adequate cyber security measures in your organization using suitable hardware and software.

Avoid the risks of phishing attacks by adhering to ethical security behavior.

Understanding cloud computing and how it can help your business is vital for the success of your venture.

The goal of cyber security is to ensure secure storage, control access and prevent unauthorized processing, transfer, or deletion of data. It safeguards the confidentiality, integrity, and availability of information.

Content

A mini project requires comparatively less time than major projects. They are comparatively simpler and have shorter duration. Mini Project helps students to explore and strengthen the understanding of fundamentals through practical application of theoretical concepts. Mini Project can help them to boost their skills and widen their horizon of thinking. It will act like beginners guide to undertake the major project/dissertation during the final year and will ensure preparedness of students to undertake major projects/dissertation. Students will be required to select the topic relevant to their specialization and that has value addition. Students will get an opportunity to work in actual industrial environment if they opt for internship. Based on the selected topic student will also prepare seminar report based on the literature survey Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available. End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution. Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the departmental committee.

Course Outcome:

After learning the course the students should be able to:

CO1: Demonstrate a sound technical knowledge of their selected mini project topic.

CO2: Undertake problem identification, formulation and solution.

CO3: Design engineering solutions to complex problems utilizing a systems approach.

CO4: Communicate with engineers and the community at large.

CO5: Demonstrate the knowledge, skills and attitudes of a professional engineer.

FEB170501: ARTIFICIAL INTELLIGENCE

Objective: With the usage of Internet and World Wide Web increasing day by day, the field of AI and its techniques are being used in many areas which directly affect human life. Various techniques for encoding knowledge in computer systems such as Predicate Logic, Production rules, Semantic networks find application in real world problems. The fields of AI such as Game Playing, Natural Language Processing, and Connectionist Models are also important. Student should know some programming language for AI.

FEB170502: MACHINE LEARNING

Objective: Machine learning allows the user to feed a computer algorithm an immense amount of data and have the computer analyze and make data-driven recommendations and decisions based on only the input data.

The goal of machine learning, closely coupled with the goal of AI, is to achieve a thorough understanding about the nature of learning process (both human learning and other forms of learning), about the computational aspects of learning behaviors, and to implant the learning capability in computer systems.

After completion of the course, the students will be able to:

CO-1: Learn the basics of learning problems with hypothesis and version spaces

CO-2: Understand the features of machine learning to apply on real world problems

CO-3: Characterize the machine learning algorithms as supervised learning and unsupervised learning and Apply and analyze the various algorithms of supervised and unsupervised learning.

CO-4: Analyze the concept of neural networks for learning linear and non-linear activation functions.

CO-5: Learn the concepts in Bayesian analysis from probability models and methods.

CO-6: Understand the fundamental concepts of Genetic Algorithm and Analyze and design the genetic algorithms for optimization engineering problems.

FEB170405: .NET TECHNOLOGY

Objective: It enables to fulfill varied functions like graphic rendering and file reading. It has all the resources to provide websites with different functionality and manage it smoothly at the same time. .NET provides Consistent programming model, Direct Support for Security, Simplified Development efforts and Easy application deployment and Maintenance.

FEB170407: BIG DATA ANALYTICS

Objective: Fundamental for Big Data Analytics this course concentrates on delivering the necessary concepts and features.

Big data analytics helps organizations harness their data and use it to identify new opportunities.

That, in turn, leads to smarter business moves, more efficient operations, higher profits and happier customers. Businesses that use big data with advanced analytics gain value in many ways, such as: Reducing cost.

FEB170505: ETHICAL HACKING

Objective: Ethical hacking is used to secure important data from enemies.

It works as a safeguard of your computer from blackmail by the people who want to exploit the vulnerability.

Using ethical hacking, a company or organization can find out security vulnerability and risks.

Course Outcome:

- **CO-1:** To apply differential and integral calculus to improper integrals and to determine applications of definite integral. Apart from some other applications they will have a basic understanding of indeterminate forms, Beta and Gamma functions
- **CO-2:** To apply the various tests of convergence to sequence, series and the tool of power series and Fourier series for learning advanced Engineering Mathematics
- **CO-3:** To compute directional derivative, maximum or minimum rate of change and optimum value of functions of several variables
- **CO-4:** Mathematics has the potential to understand the core Technological studies

CO-5: To compute the areas and volumes using multiple integral techniques

CO-6: To perform matrix computation in a comprehensive manner

| Course | | Expected Mapping with Programme Outcomes (1- Weak Correlation; 2- Medium correlation; 3- Strong Correlation) | | | | | | | | | | | | |

FEB180501: PROJECT (INDUSTRIAL INTERNSHIP)

Objective: This course is aimed to provide more weightage for project work. The projectwork could be done in the form of a summer project or internship in the industry or even a minor practical project in the college.

Credit: 18 L-T-P: 0-0-36

Teaching and Examination Scheme:

| | Teaching | Scheme | | | Ex | aminati | ion Ma | rks | |
|----|---------------|---------|-----|------|------------|--------------|----------------|-------------|-----|
| | Th Tu P Total | Credits | The | eory | Pra | ctical | Total Marks | | |
| Th | | Total | | SEE | PA | Viva | PA | | |
| | | | | | (E) | (M) | (V) | (I) | |
| 0 | 0 | 36 | 36 | 18 | 00 | 00 | 100 | 100 | 200 |

Course Outcome:

CO-1: Analyze the problem, formulation and solution of the selected project.

CO-2: Develop solutions for contemporary problems using modern tools for sustainabledevelopment..

CO-3: Choose efficient tools for designing project modules.

CO-4: Combine all the modules through effective team work after efficient testing.

CO-5: Elaborate the completed task and compile the project report.
